                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                        This invention describes novel purified human soluble guanylate cyclase alphal/betal (hsGCalphal/betal). The products of the invention have antiarteriosclerotic, vasotropic and hypotensive activity. Nucleic acid sequences encoding the alphal and/or betal subunit are useful for somatic gene therapy of arteriosclerosis and restenosis, ischemia (infarct). Antibodies to hsGCalphal/betal can be used for diagnosis of aberrant hsGCalphal/betal can be used for diagnosis of aberrant hsGCalphal/betal expression in human toisues. This sequence encodes the control of the invariance of the method in the method
                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                         120

                                                                                                                 The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, monagen, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDl

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer associated nucleic acid molecules (N) and proteins (P); where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, cypression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally. N may be used to produce the colon cancer-associated Ps. Cypressing the nucleic acids into a host cell and culturing the cell of express the proteins. N and P can be used in the prevention, diagnosis and AAA7789 represent sequences used in the exemplification of the

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. ESTs sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oilgo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insectifides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL016176-ABL30511), expressed DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the isolation of human polynucleotide sequences that are differentially expressed during foam cell differentiation. The polynucleotide sequences of the invention or a composition comprising these polynucleotides are useful as a high throughput method for detecting altered expression of one or more polynucleotides in a sample. The polynucleotides can be used in the diagnosis of disorders associated with foam cell development such as atherosclerosis, cerebral stroke, and cardiovascular disorders such as coronary artery disease. The polynucleotide sequences can also be used as PCR primers and probes. The polynucleotides of the invention are also useful in gene therapy. AAS9476-AAAS95021 represent the human polynucleotide sequences of the invention are also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the CDNA encoding human cyclic nucleotide
associated protein-3 (CNAP-3), identified in incyte clone 159278,
that is isolated from ADBNINBOL CDNA library. It is expressed in
nervous, reproductive, cardiovascular and developmental tissues
CNAP sequences may be used for prevention, treatment and diagnosis of
diseases associated with altered CNAP expression such as, cell
proliferative disorders (e.g. arteriosclerosis, cirrhosis, leukaemia,
lymphoma and cancer of the breast, prostate, lung and brain), autoimmune/
inflammatory disorders (e.g. asthma, anaemia, diabetes mallitus, multiple
sclerosis and psoriasis), neurological disorders (e.g. epilepsy,
Alzheimer's/Parkinson's disease and strokes), vision disorders (e.g.
conjunctivitis, glaucoma, cataracts and retinitis pigmentosa),
reproductive disorders (e.g. infertility, uterine fibroids, ectopic
pregnancies and impotence) and smooth muscle disorders (e.g. angina,
anaphylactic shock, Kearns-Sayre syndrome and hypertension). It can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ë,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes novel purified human soluble guanylate cyclase alphal/Detal (hsGCalphal/Detal). The products of the invention have antiarteriosclerotic, vasotropic and hypotensive activity. Nucleic acid sequences encoding the alphal and/or betal subunit are useful for somatic gene therapy of arteriosclerosis and restenosis, ischemia (infarct), peripheral arterial occlusive disease and arterial hypertension. Antibodies to hsGcalphal/Detal can be used for diagnosis of abberrant human soluble quanylylcyclase alphal subunit described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                     1124 CATGATGCCACGCGCGATCTTGTTTTTGGGAGAACAATTTAGAGGAAATACAAACTC 1183

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid molecule (I) compa an unilectide sequence given in Tables 1-9 (ABV6010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              I) is also useful as a pharmacodyanamic or pharmacogenomic marker

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:

(a) assessing whether a patient.
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) selecting a composition for inhibiting prostate cancer in a patient;
(f) assessing the prostate cancer has metastasized in a patient;
(f) assessing the grostate cancer has metastasized in a patient;
(f) assessing the grostate cancer has metastasized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                   Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1978 GACATCGTTGGGTTCACTGCCATCTGCTC-----ACCGCTGCAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is affilicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      a composition for inhibiting prostate cancer in a patient; the prostate cell carcinogenic potential of a compound;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -

    (a) assessing whether a patient is affilicted with prostate cancer;
    (b) monitoring the progression of prostate cancer in a patient;
    (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
    (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AGAAGAGGCTGGGGAAGCTGAACCTTGAGCAAGCCCACCAAGCCCTGGAGGG 1857
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
                                                                      cytostatic; carcinogen; pharmacodyanamic marker;
gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -

                                                                                                                                                                                                                                                          The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contexting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CATGATGCCACGCGCGATCTTGTTTTGGGAGAACAATTTAGAGAATACAAACTC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              prostate cancer. The nucleic acid sequences are particularly useful
in gene therapy, as a vaccine or in antisense applications.

                                                                                                                                                                                                                              1661 ACTGGAGAGTAGTTACAGGTGTCATAGGACAGCGGATGCCTCGATACTGTCTTTTTGGG 1720
                                                                                                                                                                                                                                                                                                                                             CACAAAGAGAGTGATACTCATGCTGTTCAGATAGCGCTGATGGCCCTGAAGATGATGATGGAG 2187
                                                                                                                                                                                                                                                            The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contecting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical

to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer, as well as for identifying modulators of prostate cancer, as well as for identifying modulators of prostate cancer or agents that inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

ABK92115-ABK92263 represent prostate cancer-associated polynucleotide

Predicting toxic effects of compounds or the progression of these tox effects by determining the changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells

Claim 1; Seq ID No 1569; 239pp; English.

The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or calls. Also included are methods of predicting at least one toxic calls. Also included are methods of predicting at least one toxic calls. Also included are methods of predicting at least one toxic calls. Also included are methods comprision of a toxic effect, preferably the hepatotoxicity of a compound, comprision detecting the level of expression in a tissue or cell sample exposed to the compound of two or more genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression. The method can also be used to identify an agent which modulates the toxic response and predict cellular pathways that a compound modulates to in a cell. The methods utilise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer specifically hybridises to a gene listed in the specification, a computer system comprising a database containing information used to present information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a set of genes comprising at least two genes listed in the specification. The method is useful for elucidating changes in dentifying markers in drug screening and toxicity markers in coxicity markers in drug screening and toxicity assays. The genes and coxicity markers in drug screening and toxicity assays. The genes and gene expression information of the physiological state of tissue or cell

Anote—"Organ: pooled pancreas and spleen; Vector:

PCMV-SPORT6; Site_1: Not1; Site_2: EcoRV (destroyed); RNA
source anonymous pool of spleen and pancreas from 28 yo
male. Library is oligo-dT primed and directionally cloned
(EcoRV site is destroyed upon cloning). Average insert
size 1.5 kb, insert size range 1-2.5 kb. Library is
normalized and enriched for full-length clones and was
constructed by C. Gruber (Invitrogen). Research Genetics
tracking code 025. Note: this is a NIH_MGC Library."
